Summary

Java Backend Developer with strong expertise in **Java (8/17/21)**, **Spring Boot**, **Spring Security**, and **Microservices** architectures. Proven track record contributing to major open-source ecosystems (**Apache Hop**, **Apache Shiro**, **Kestra**) resolving core engine and protocol-level bugs. Hands-on experience designing RESTful APIs, relational data models with **Spring Data JPA/Hibernate**, and resilient inter-service communication. Combines rigorous backend engineering with 4+ years of cross-functional enterprise domain experience in supply chain, SAP ERP systems, and e-commerce platforms.

Technical Skills

Languages & Frameworks: Java (8/17/21), Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate

Architecture & Cloud: Microservices, Spring Cloud (Eureka, API Gateway, OpenFeign), RESTful APIs, JWT, OAuth2

Databases & Caching: PostgreSQL, MySQL, Database Indexing, Query Optimization, Redis (Basics)

DevOps & Tooling: Docker, Git, GitHub, Maven, AWS (EC2), Linux (Bash), Swagger/OpenAPI, Postman, JUnit 5

Open Source Contributions

Apache Hop | *Data Orchestration Platform (ASF Top-Level)*

[PR #8344 \(Merged\)](#) | [PR #8343](#)

- **Hop Web Session Refresh (Issue #8327 - Merged):** Fixed a thread stalled session bug in Hop Web by maintaining an active `ServerPushSession` to prevent UI logging refresh freezes.
- **Suppressed Wire Logging (Issue #8340):** Optimized startup logging in `HopEnvironment` to silence redundant HTTP wire logs during notification polling; added regression test suite.

Apache Shiro | *ASF Security Framework (Merged)*

[PR #2854](#)

- **Fixed Active Directory DN Authentication:** Resolved Active Directory user principal name binding bug; validated and **merged** into official Apache Shiro release 3.0.1.

Jenkins | *Workflow SCM Step & Jira Plugins*

[PR #143](#) | [PR #273](#)

- **Multibranch URL Encoding (Issue #142):** Resolved broken build/deployment links sent to Jira Cloud by engineering `RunUrlProvider` to properly percent-encode branch paths; backed with `JenkinsRule` integration tests.
- **Polling Optimization (PR #273):** Suppressed redundant baseline computation in `SCMStep` when polling is disabled to eliminate unnecessary workspace traversals.

Kestra | *Declarative Orchestration Engine (15k+ Stars)*

[PR #51](#) | [PR #19007](#)

- **Telegram Plugin (Merged):** Clarified `parseMode` schema and added case-sensitive enum validation to prevent malformed payload rejections.
- **Core Engine (Issue #18981):** Fixed documentation Model Context Protocol (MCP) client auto health-check socket floods across builders; added regression test suite.

Projects

Synoptiq

[\[Code\]](#) | [\[Demo\]](#)

Java, Spring Boot, Spring Security, PostgreSQL, OAuth2, JWT, Docker, AWS EC2, HTTP/2, REST APIs, Gmail API

- Architected an enterprise workflow platform featuring OAuth2 Google Sync with Gmail API to ingest and synchronize inbox records into PostgreSQL.
- Configured **HTTP/2 multiplexing** to eliminate Head-of-Line blocking, allowing parallel API requests and real-time Server-Sent Events (SSE) streams over a single persistent TCP connection.
- Secured the application using a stateless **JWT Authentication Filter Chain**, cookie-based session tokens, and role-based access control.

Routesphere

[\[GitHub Repository\]](#)

Spring Boot, Spring Cloud (Eureka, API Gateway, OpenFeign), Docker, JWT, PostgreSQL, Spring Security

- Engineered a scalable microservices architecture decomposed into **9 independently deployable services** for dispatch, tracking, and order fulfillment.
- Integrated **Spring Cloud Netflix Eureka** for dynamic service registry and **Spring Cloud Gateway** for centralized JWT validation and edge routing.
- Leveraged **Declarative Feign Clients** with client-side load balancing to ensure resilient inter-service synchronous communication.

Workboard

[\[GitHub Repository\]](#)

Java, Spring Boot, Spring Data JPA, Hibernate, MySQL, Spring Security, RESTful Web Services

- Built a modular REST backend managing cross-departmental project workflows, task assignments, and employee role hierarchies.
- Designed normalized **JPA/Hibernate relational schemas** (`@ManyToOne`, `@OneToMany`) and dynamic pagination/sorting via JPA Specifications.

Professional Experience

E-Commerce & Supply Chain Operations

2021 – 2026

Wipro Consumer Care, Medicon Leather, Mannol India, iThink Logistics

Bengaluru, India

- **Data & ERP Systems:** Managed SKU catalogs, multi-channel order pipelines, and SAP ERP inventory audits across 7+ online marketplaces (Amazon, Flipkart, Myntra), maintaining 99%+ inventory data accuracy and preventing stockouts.
- **Logistics & Fulfillment:** Coordinated regional B2B logistics pipelines and delivery workflows, developing deep domain expertise in order fulfillment lifecycles, warehouse routing, and supply chain bottlenecks that directly inform backend system design.

Education

Bachelor of Computer Applications (BCA)

Expected 2028

University of Mysore

Mysuru, Karnataka

- Self-paced / Online mode; available for immediate full-time employment.

Rural Institute of Advanced Studies

2018

Higher Secondary Certificate (12th)

Raipur, CG
